记录问题

1怎么看装了什么版本的环境

```
find ~/your_project_path -type d -name "venv" -o -name "env" -o -name
"*env*"
```
- 路径短、明确在你的工程目录下
- 内含 bin/（或 Windows 下 Scripts/）、lib/、pyvenv.cfg 文件
```
/Users/songzhihao/PythonFile/.venv

/Users/songzhihao/.pyenv/versions/3.9.6/envs/myenv-3.9.6
```

2激活虚拟环境：

```
普通 venv:
source /Users/songzhihao/PythonFile/.venv/bin/activate

pyenv 虚拟环境:
pyenv activate myenv-3.9.6

(myenv-3.9.6) songzhihao@chuck build % pyenv versions
  system
  3.9.6
  3.9.6/envs/myenv-3.9.6
  3.11.9
* myenv-3.9.6 --> /Users/songzhihao/.pyenv/versions/3.9.6/envs/myenv-3.9.6
(set by PYENV_VERSION environment variable)
```

3.geant4运行python

```
pyenv activate myenv-3.9.6
```

4.安装软件包

```
pip3 install pandas matplotlib
```
